Category:Pascal softwareQ: How to change an Excel cell's background color programmatically? I've already tried the following:
var cell = sheet.Cells[1, 1]; cell.Interior.ColorIndex = 10; cell.Font.ColorIndex = 30; cell.Font.Bold = true; And the following:
var cell = sheet.Cells[1, 1]; cell.Interior.Color = System.Drawing.Color.Red; cell.Font.Color = Color.Red; cell.Font.Bold = true;
And I'm sure the following works, but I can't use it because it requires a type: Microsoft.Office.Interop.Excel.Range range =
xlApp.get_Range("A1"); range.Format.Interior.Color = System.Drawing.Color.Red; range.Font.Color = Color.Red;
range.Font.Bold = true; I've also tried: var cell = sheet.Cells[1, 1]; cell.EntireColumn.Interior.Color =
System.Drawing.Color.Red; cell.EntireColumn.Font.Color = Color.Red; cell.EntireColumn.Font.Bold = true; The final option
I've tried is: var cell = sheet.Cells[1, 1]; cell.Interior.Color = System.Drawing.Color.Red; cell.Interior.Font.Color = Color.Red;
cell.Interior.Font.Bold = true; How do I set Excel cell's background color programmatically? A: Use the Range.Format property.
Range rng = sheet.Cells[1, 1]; rng.Format.Interior.Color = System.Drawing.Color.Red; rng.Font.Color = Color.Red;
rng.Font.Bold = true; order denying the motion for reconsideration was not an abuse of discretion. Finally, we review the district
court's decision to deny the request for reconsideration because of delay for an abuse of discretion. See *Batts v. Tow- Nill Cove
